The top photo shows well 2006-13 Ko'Olina golf course well. Installed on the well is a Peerless pump, 840 gpm capacity, Serial # 86-034029, powered by a 25hp Newman motor, RB 256, Type F21R2PA.

The two lower photos show nonpotable wells 2006-14 & 15 from a distance with the nonpotable reservoir.

These are brackish water wells. In the past, BWS staff took monthly water samples of these wells. The wells and reservoir were enclosed by gated, chain link enclosures locked with BWS locks. Note the dryness of the surrounding vegetation in contrast to the irrigated areas at Ko'Olina.
