Dear Mr. No. 3496-02

Gentlemen:

Enclosed is a signed copy of the water use permit for Dr. Hope Farms.

As to a water shortage plan, we are conservative, not in our use of water. The drinking requirements of the livestock are fairly constant, increasing in periods of extremely hot weather. The paddock area for the horses is watered to keep forage grass going. The cattle areas are not irrigated. The residential areas are relatively small.

When the Benedict group bought a portion of the ranch land "the 8 to 10 members of the International Order" water use by them would not have had a large impact. However, their subsequent disclosure of plans for a considerable larger public development cast the water situation in another light. They are aware that I will limit their water use, and should there be a shortage, they would of course pursue a conservation course, and any unexpected development would be further curtailed in their usage.

I hope this is of help to you.

Sincerely,

[Signature]

C. Paul Sakoda
