This is a portion of a larger HiRISE image obtained of the floor of Pasteur crater, Mars. The image was obtained May 25th, 2018, and is centered at 19.3°N, 24.4°E. It is the central color segment of a broader field of view obtained in black and white. Eroded segments of the crater floor form the topographic highs. In this stretched color image, darker dunes appear as blue. Image width is ~800 meters.
