As the International Space Station (ISS) was traveling over India towards the day-night terminator, an astronaut shot this photo of Earth’s third-highest peak, Kangchenjunga, and the surrounding peaks warmly lit by the setting Sun. Kangchenjunga rises >8,500 m above sea level, and stands in eastern Nepal near the border with India and ~120 km east-southeast of Mount Everest. The apex of Kangchenjunga is surrounded by valley glaciers, some of which can be seen in the shadows of the image.
