As you recall, the term project for this class is for you to make a stone implement using traditional Hawaiian methods. You also need to produce a 1-page display card that will go with your stone implement while it is on display in the POST building. This card needs to have the following:
1) Your name
2) What your stone implement is (Hawaiian name and English name)
3) What your stone implement is used for
4) Geologically, what type of rock it is (‘a‘ā core, pāhoehoe, etc.)
5) A map showing where you gathered the stone
6) A brief discussion of why you picked that particular stone, how the geological qualities of your stone were important to how you made the implement, how these qualities made the work easy, difficult, etc. Discuss also the qualities of the hammer stone you selected and used.
7) Use 14-point font (or larger) for the final card so that it will be easy to read.
